First steps ...

How to sign up at locr

Signing up at locr is blindingly easy.

- To sign up for the **first time** open the locr web site: <http://www.locr.com>.
- Click on “Sign up”.

The image shows a dark navigation bar with several orange text links: 'Log in', 'Upload', 'Downloads', 'Sign up', 'Forum', and 'Language'. A mouse cursor is pointing at the 'Sign up' link.

- On the next page, please fill the compulsory fields (with *).
- The Anti spam verification is obligatory, too.
Therefore, in the list box please select the place name in the middle of the map.
- Click on “Create” to complete the registration.

Having successfully signed up locr will send you an e-mail.

You can change the password at any time.

If you have already signed up, just click “Log in”.

How to install locr the GPS Photo for Symbian

If you want to download, install, and use the locr GPS Photo for Symbian software you need an account, so sign up (“How to sign up at locr”, see above).

To install the locr GPS Photo for Symbian software, you can download the installation program from the locr web site.

Please note, important! If there is a former version of locr GPS Photo for Symbian installed on your computer, you will have to delete it **before** installing the current version. For how to remove applications, please refer to your cell phone’s manual.

Download and install the locr GPS Photo for Symbian

- On the locr web site (<http://www.locr.com>) click on “Downloads”, select “locr GPS Photo for Symbian”, and follow the instructions on the screen.

The locr GPS Photo for Symbian software will be downloaded to your PC. Please copy the “locr.sis” file to your cell phone after the download.

- Now, you can install the locr GPS Photo for Symbian on you cell phone. For how to install the locr application, please refer to your cell phone’s manual.

After the installation the locr GPS Photo for Symbian icon appears on the desktop.

How to use locr GPS Photo for Symbian

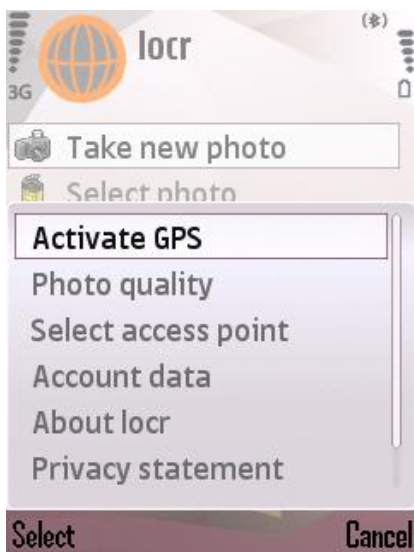

Opening the locr GPS Photo for Symbian application shows the “Edit login data” dialog. Here you can sign in: enter user name and password. You will have to log in only once on your cell phone. The user name and the password will be stored.

The locr GPS Photo for Symbian main menu offers five options:

- Take new photo
- Select photo
- Visit locr Website
- Show photo nearby
- Visit my locr gallery

The “Options” key of your cell phone allows you to determine further settings like “Activate GPS”, “Photo quality”, “Account data”, etc.

Note: These are general settings!

Take new photo

Depending on your cell phone, you can either use the integrated GPS functionality, or use an external GPS Bluetooth data logger in addition.

The “Waiting for first GPS coordinates” message will appear. If necessary, wait a second, or select “Cancel” if you want to take a photo without GPS information, and then take the photo.

- For photos with GPS information, the respective GPS coordinates will be displayed.
- For photos without GPS information you will be asked whether the last known GPS position should be used – if such information already exists.

Now, you can upload the taken photo to the locr web site. Therefore choose the “Select access point” option, and enable an available WLAN connection.

Photos with GPS information will be uploaded **with the coordinates**, and can then be viewed on the locr web site with their position on the map.

Please note! All your photos you upload to the locr web site will be uploaded as private photos. That means they will be only visible to you. For how to change that private status, please refer to the “All around photos ...” section in the FAQs.

Select photo

“Select photo” lets you open your photos and edit the photo information.

You can

- Upload the respective photo to locr.
- Use Manual geotagging
If any GPS information already exists, you will be asked whether the last known GPS position should be used for photos without GPS information. Or you can change the current GPS information for the respective photo.
- Enter text comment
Here you can enter a comment for your photo. This comment will then be uploaded, too.

Visit locr Website

You can visit the locr website at any time, regardless whether you've already uploaded photos or not.

In case you need some help or find some answers, simply click the "Help" tab. The browser will open, and you will find a comprehensive list of FAQs (Frequently Asked Questions).

Show photos nearby

The "Show photos nearby" option displays the public photos taken nearby of all locr members in the browser.

Visit my locr gallery

Your click on "Visit my locr gallery" opens the locr web site in your browser and lets you view your own photos uploaded to locr.

Please do not forget: Any internet connection may cause costs. Uploading photos from your cell phone to the locr web site may also cost money!
